1. Introduction

This document presents a formal data dictionary for the current KODUS web application database as observed from the running application configuration, the live MySQL schema, and the PHP files that create, alter, query, and maintain the database objects. It is intended for hosting requirements submission and focuses only on structures and meanings that can be grounded in the present codebase and configured database.

2. Purpose of the Document

The purpose of this document is to identify the current database elements used by KODUS, describe the tables and columns that are materially part of the deployed application, summarize keys and relationships, and record schema observations that require project-owner confirmation before production hosting.

3. Scope

This document covers the active database named `kodus-dev_db` as reached by `config.php`, including tables, columns, data types, indexes, foreign keys, and application-level usage that can be traced in the PHP codebase. Historical SQL dump files were intentionally excluded from the source basis.

4. System Overview

KODUS is a PHP and MySQL web application that supports user management, login and SSO, two-factor authentication, incoming and outgoing document tracking, beneficiary or MEB data management, inbox messaging, calendar scheduling, fund monitoring, crossmatch and deduplication utilities, and implementation-status monitoring for LAWA and BINHI activities.

5. Database Overview

- Active database inspected: `kodus-dev_db`
- Database access path: `config.php` using `mysqli` and environment-backed connection settings
- Character set behavior observed in helper-created tables: `utf8mb4`
- Current tables documented from live schema: 40
- Schema source basis: `information_schema.TABLES`, `information_schema.COLUMNS`, `information_schema.STATISTICS`, and foreign-key metadata queried from the configured KODUS database

6. Naming Conventions

- The schema uses a mixed naming style with both `snake_case` and legacy `camelCase` or abbreviated field names.
- Primary keys are commonly stored in an `id` column, but some tables use composite read-state keys and some lookup tables do not declare a primary key.
- Timestamp fields frequently use names such as `created_at`, `updated_at`, `deleted_at`, `read_at`, and `trashed_at`.
- Several modules store lists or structured content in `TEXT` or `LONGTEXT` columns and interpret them in PHP logic rather than through dedicated JSON column types.

7. Table Inventory

Table Name	Category	Columns	Indexes	Foreign Keys	Purpose / Description
aatracker	Operational	16	1	0	Legacy action and approval tracker for document intake and routing.
app_notification_reads	Utility / Audit	3	2	1	Per-user read state for notification feed records.
app_notifications	Utility / Audit	10	3	0	Notification feed records shown inside KODUS.
app_settings	Utility / Audit	4	1	0	Key-value application settings maintained by helper logic.
audit_logs	Operational	6	1	0	Audit trail for security and user actions.
barangay	Reference	3	0	0	Reference list of barangays.
breakdown	Operational	8	1	0	Payout and beneficiary breakdown data.
contact_message_recipients	Operational	6	4	2	Normalized recipient list for contact-message threads.
contact_messages	Operational	11	1	0	Inbox or contact-message threads.
contact_replies	Operational	9	3	2	Replies attached to inbox or contact-message threads.
crossmatch_jobs	Operational	11	1	0	Crossmatch processing jobs.
crossmatch_results	Operational	4	1	0	Crossmatch result rows.
deduplication_jobs	Operational	9	1	0	Deduplication processing jobs.
deduplication_results	Operational	6	2	1	Potential duplicate result rows.
deduplication_template_outputs	Utility / Audit	8	3	0	Generated deduplication template history.
draggable_events	Operational	5	1	0	Reusable drag-and-drop calendar labels.
event_guests	Operational	6	3	2	Normalized guest or invitee list for calendar events.
event_schedule_days	Operational	9	4	0	Expanded per-day schedule rows for events.

Table Name	Category	Columns	Indexes	Foreign Keys	Purpose / Description
events	Operational	16	1	0	Primary calendar event records.
fund_monitoring_entries	Operational	8	2	1	Monthly obligations and disbursement entries.
fund_monitoring_items	Operational	15	3	0	Fund monitoring master items.
fund_monitoring_object_codes	Operational	8	2	0	Reference object codes for fund monitoring.
imp_status	Legacy / Transitional	11	1	0	Legacy implementation-status table retained in the live schema.
incoming	Operational	12	1	0	Incoming document tracking records.
mail_logs	Utility / Audit	6	1	0	Outbound mail-delivery log entries.
meb	Operational	33	2	0	Master beneficiary or MEB records.
meb_change_history	Utility / Audit	7	3	0	Before-and-after history for MEB edits.
mebis_consolidator_outputs	Utility / Audit	7	2	0	Generated MEBIS consolidator output history.
mebis_lgu_template_outputs	Utility / Audit	8	2	0	Generated MEBIS LGU template output history.
message_reads	Utility / Audit	7	3	2	Per-user read and trash state for message threads.
municipality	Reference	3	0	0	Reference list of municipalities.
outgoing	Operational	12	1	0	Outgoing or forwarded document tracking records.
pdos	Reference	3	1	0	Reference PDO list used by the application.
program_activity_actual_projects	Operational	25	3	1	Normalized actual project/accomplishment rows linked to implementation activity metadata.
program_activity_metadata	Operational	76	2	0	Implementation monitoring rows for location-level program activity data.
project_lawa_binhi_targets	Operational	32	3	0	Annual LAWA and BINHI target configuration by location.

Table Name	Category	Columns	Indexes	Foreign Keys	Purpose / Description
project_target_entries	Operational	17	3	1	Normalized per-project target rows linked to annual LAWA and BINHI target records.
project_variable_config	Operational	12	2	0	Fiscal-year project variables, rates, and factor values.
provinces	Reference	3	1	0	Reference list of provinces.
users	Operational	42	1	0	User accounts, authentication state, profile data, and role or 2FA metadata.

Absent or Legacy References Not Included in the Detailed Dictionary

Table / Object	Current Status	Observed Basis
holidays	Absent from current configured database	`pages/calendar.php`, `pages/fetch_events.php`, `pages/fetch_holidays.php`
coreworkforce	Absent from current configured database	No current PHP usage found
trackdata	Absent from current configured database	No current PHP usage found
_merge_conflicts	Absent from current configured database	No current PHP usage found

8. Detailed Data Dictionary

8.1 aaTracker

Purpose / Description: Legacy action and approval tracker for document intake and routing.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: pages/save_document.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `pages/save_document.php`
aaDate	date	N/A	No	None	none	Field used to store aa date; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15	Live schema via information_schema; PHP usage in `pages/save_document.php`
tracking_number2	varchar(255)	255	No	None	none	Generated tracking number assigned after insert.	04-15-26-123	Live schema via information_schema; PHP usage in `pages/save_document.php`
description	varchar(1000)	1000	No	None	none	Field used to store description; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `pages/save_document.php`
bFocal	date	N/A	No	None	none	BFocal routing date for the action and approval tracker workflow.	2026-04-15	Live schema via information_schema; PHP usage in `pages/save_document.php`
focal	date	N/A	No	None	none	Field used to store focal; exact business	2026-04-15	Live schema via information_schema;

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
						meaning to be confirmed by project owner where not obvious from code.		PHP usage in `pages/save_document.php`
remarks2	varchar(1000)	1000	Yes	None	none	Remarks field currently present in the live schema.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `pages/save_document.php`
sHead	date	N/A	No	None	none	Field used to store s head; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15	Live schema via information_schema; PHP usage in `pages/save_document.php`
file_name	varchar(255)	255	No	None	none	Field used to store file name; exact business meaning to be confirmed by project owner where not obvious from code.	document.pdf	Live schema via information_schema; PHP usage in `pages/save_document.php`
file_size	int	10	No	None	none	Field used to store file size; exact business meaning to be confirmed by project owner where not obvious from code.	245760	Live schema via information_schema; PHP usage in `pages/save_document.php`
file_type	varchar(255)	255	No	None	none	Field used to store file type; exact business meaning to be confirmed by project owner where not obvious from code.	application/pdf	Live schema via information_schema; PHP usage in `pages/save_document.php`
upload_time	datetime	N/A	No	None	none	Field used to store upload time; exact business meaning to be confirmed by project owner where	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `pages/save

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
						not obvious from code.		_document.php`
aaType	int	10	No	None	none	Field used to store aa type; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `pages/save_document.php`
outDate	date	N/A	No	None	none	Field used to store out date; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15	Live schema via information_schema; PHP usage in `pages/save_document.php`
personnel	varchar(255)	255	No	None	none	Field used to store personnel; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `pages/save_document.php`
dateReceived	date	N/A	No	None	none	Field used to store date received; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15	Live schema via information_schema; PHP usage in `pages/save_document.php`

8.2 app_notification_reads

Purpose / Description: Per-user read state for notification feed records.

Primary Key: notification_id, user_id

Foreign Keys: notification_id -> app_notifications(id)

Primary Source Basis: app_notification_helpers.php, notifications/mark_read.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
notification_id	int unsigned	10	No	None	PK, FK	Field used to store notification id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
user_id	int	10	No	None	PK, Indexed	Field used to store user id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
read_at	datetime	N/A	No	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`

8.3 app_notifications

Purpose / Description: Notification feed records shown inside KODUS.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: app_notification_helpers.php, notifications/mark_read.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int unsigned	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
category	varchar(80)	80	No	system	Indexed	Field used to store category; exact business meaning to be confirmed by project owner where not obvious from code.	system	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
title	varchar(255)	255	No	None	none	Field used to store title; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
message	text	65535	No	None	none	Field used to store message; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
url	varchar(2048)	2048	Yes	None	none	Field used to store url; exact business meaning to	/pages/calendar.php	Live schema via information_schema; PHP usage

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
						be confirmed by project owner where not obvious from code.		in `app_notification_helpers.php`, `notifications/mark_read.php`
icon_class	varchar(80)	80	No	fas fa-bell	none	Field used to store icon class; exact business meaning to be confirmed by project owner where not obvious from code.	fas fa-bell	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
color_class	varchar(40)	40	No	text-warning	none	Field used to store color class; exact business meaning to be confirmed by project owner where not obvious from code.	text-warning	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
actor_user_id	int	10	Yes	None	none	Field used to store actor user id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
actor_name	varchar(255)	255	Yes	None	none	Field used to store actor name; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `app_notification_helpers.php`, `notifications/mark_read.php`
created_at	datetime	N/A	No	CURRENT_TIMESTAMP	Indexed	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `app_notification_helpers.php`,

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
								`notifications/mark_read.php`

8.4 app_settings

Purpose / Description: Key-value application settings maintained by helper logic.

Primary Key: setting_key

Foreign Keys: None declared in the current schema.

Primary Source Basis: error_helpers.php, admin/maintenance.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
setting_key	varchar(100)	100	No	None	PK	Field used to store setting key; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `error_helpers.php`, `admin/maintenance.php`
setting_value	longtext	4294967295	Yes	None	none	Field used to store setting value; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `error_helpers.php`, `admin/maintenance.php`
updated_at	datetime	N/A	No	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `error_helpers.php`, `admin/maintenance.php`
updated_by	int	10	Yes	None	none	Field used to store updated by; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `error_helpers.php`, `admin/maintenance.php`

8.5 audit_logs

Purpose / Description: Audit trail for security and user actions.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: audit_helpers.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `audit_helpers.php`
user_id	int	10	Yes	None	none	Field used to store user id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `audit_helpers.php`
action	varchar(255)	255	Yes	None	none	Field used to store action; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `audit_helpers.php`
details	text	65535	Yes	None	none	Field used to store details; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `audit_helpers.php`
ip_address	varchar(45)	45	Yes	None	none	Field used to store ip address; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `audit_helpers.php`
created_at	datetime	N/A	Yes	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
								schema; PHP usage in `audit_helper s.php`

8.6 barangay

Purpose / Description: Reference list of barangays.

Primary Key: To be confirmed by project owner

Foreign Keys: None declared in the current schema.

Primary Source Basis: get_data.php, live_refresh.php, payout.php, project_targets_helpers.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	varchar(255)	255	No	None	none	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `get_data.php`, `live_refresh.php`, `payout.php`
municipality_id	varchar(255)	255	No	None	none	Field used to store municipality id; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `get_data.php`, `live_refresh.php`, `payout.php`
brgy_name	varchar(255)	255	No	None	none	Field used to store brgy name; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `get_data.php`, `live_refresh.php`, `payout.php`

8.7 breakdown

Purpose / Description: Payout and beneficiary breakdown data.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: payout.php, implementation-status/program-activities.php, pages/meb-batch-summary.php, pages/payout.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`
province	varchar(250)	250	No	None	none	Location value stored by the record.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`
lgu	varchar(250)	250	No	None	none	Field used to store lgu; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`
barangay	varchar(250)	250	No	None	none	Location value stored	To be confirmed by	Live schema via

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
						by the record.	project owner	information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`
benesNumber	int	10	No	None	none	Field used to store benes number; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`
amount	int	10	No	None	none	Field used to store amount; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
paid	int	10	No	None	none	Field used to store paid; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`
payoutDate	date	N/A	Yes	None	none	Field used to store payout date; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15	Live schema via information_schema; PHP usage in `payout.php`, `implementation-status/program-activities.php`, `pages/meb-batch-summary.php`

8.8 contact_message_recipients

Purpose / Description: Normalized recipient list for contact-message threads.

Primary Key: id

Foreign Keys: message_id -> contact_messages(id); user_id -> users(id)

Primary Source Basis: inbox/mailbox_helpers.php, send_contact.php, inbox/index.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	bigint	19	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `inbox/mailbox_helpers.php`, `send_contact.php`, `inbox/index.php`
message_id	int	10	No	None	FK, Indexed	Parent contact message thread identifier.	1	Live schema via information_schema; PHP usage in `inbox/mailbox_helpers.php`, `send_contact.php`, `inbox/index.php`
user_id	int	10	Yes	None	FK, Indexed	Field used to store user id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `inbox/mailbox_helpers.php`, `send_contact.php`, `inbox/index.php`
recipient_email	varchar(255)	255	No	None	Indexed	Email address of the intended message recipient.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `inbox/mailbox_helpers.php`, `send_contact.php`, `inbox/index.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
recipient_name	varchar(255)	255	Yes	None	none	Field used to store recipient name; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `inbox/mailbox_helpers.php`, `send_contact.php`, `inbox/index.php`
created_at	timestamp	N/A	Yes	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `inbox/mailbox_helpers.php`, `send_contact.php`, `inbox/index.php`

8.9 contact_messages

Purpose / Description: Inbox or contact-message threads.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: send_contact.php, inbox/index.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
user_email	varchar(255)	255	Yes	None	none	Field used to store user email; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
user_name	varchar(255)	255	Yes	None	none	Field used to store user name; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
recipient	varchar(255)	255	Yes	None	none	Field used to store recipient; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
subject	text	65535	Yes	None	none	Field used to store subject; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
message	text	65535	Yes	None	none	Field used to store message; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
sent_at	datetime	N/A	Yes	CURRENT_TIMESTAMP	none	Field used to store sent at; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
is_read	tinyint	3	No	0	none	Field used to store is read; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
admin_reply	text	65535	Yes	None	none	Field used to store admin reply; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
replied_at	datetime	N/A	Yes	None	none	Field used to store replied at; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`
attachment	varchar(5000)	5000	Yes	None	none	Field used to store attachment; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `send_contact.php`, `inbox/index.php`

8.10 contact_replies

Purpose / Description: Replies attached to inbox or contact-message threads.

Primary Key: id

Foreign Keys: message_id -> contact_messages(id); user_id -> users(id)

Primary Source Basis: inbox/send_reply.php, inbox/mailbox_helpers.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `inbox/send_reply.php`, `inbox/mailbox_helpers.php`
message_id	int	10	No	None	FK, Indexed	Field used to store message id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `inbox/send_reply.php`, `inbox/mailbox_helpers.php`

						be confirmed by project owner where not obvious from code.		`crossmatch/upload_handler.php`, `crossmatch/run.php`

8.12 crossmatch_results

Purpose / Description: Crossmatch result rows.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: crossmatch/run.php, crossmatch/results.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `crossmatch/run.php`, `crossmatch/results.php`
job_id	char(32)	32	No	None	none	Field used to store job id; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `crossmatch/run.php`, `crossmatch/results.php`
record_json	json	N/A	No	None	none	Field used to store record json; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `crossmatch/run.php`, `crossmatch/results.php`
candidates_json	json	N/A	No	None	none	Field used to store candidates json; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `crossmatch/run.php`, `crossmatch/results.php`

8.13 deduplication_jobs

Purpose / Description: Deduplication processing jobs.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: deduplication/upload_handler.php, deduplication/worker_v2.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `deduplication/upload_handler.php`, `deduplication/worker_v2.php`
user_id	int	10	No	None	none	Field used to store user id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `deduplication/upload_handler.php`, `deduplication/worker_v2.php`

similarity	int	10	Yes	None	none	Field used to store similarity; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `deduplicatio n/worker_v2. php`, `deduplicatio n/results.php`

8.15 deduplication_template_outputs

Purpose / Description: Generated deduplication template history.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: deduplication/helpers/generator_history.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	bigint unsigned	20	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`
output_token	varchar(32)	32	No	None	Indexed	Field used to store output token; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`
filename	varchar(255)	255	No	None	none	Field used to store filename; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`
municipality_name	varchar(191)	191	No		none	Field used to store municipality name; exact business meaning to be confirmed by project owner where not obvious from code.		Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`
row_count	int unsigned	10	No	0	none	Field used to store row count; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
source_file	varchar(255)	255	No		none	Field used to store source file; exact business meaning to be confirmed by project owner where not obvious from code.		Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`
created_by	int	10	Yes	None	Indexed	Field used to store created by; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`
created_at	datetime	N/A	No	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `deduplication/helpers/generator_history.php`

8.16 draggable_events

Purpose / Description: Reusable drag-and-drop calendar labels.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: pages/add_draggable.php, pages/calendar.php, pages/delete_draggable.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `pages/add_draggable.php`, `pages/calendar.php`, `pages/delete_draggable.php`

after_json	longtext	4294967295	No	None	none	Field used to store after json; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `meb_change_history_helpers.php`, `pages/meb-change-review.php`
created_at	datetime	N/A	No	CURRENT_TIMESTAMP	Indexed	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `meb_change_history_helpers.php`, `pages/meb-change-review.php`

8.28 mebis_consolidator_outputs

Purpose / Description: Generated MEBIS consolidator output history.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: mebis-consolidator/helpers/history.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	bigint unsigned	20	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`
output_token	varchar(32)	32	No	None	Indexed	Field used to store output token; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`
filename	varchar(255)	255	No	None	none	Field used to store filename; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`
row_count	int unsigned	10	No	0	none	Field used to store row count; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`
source_files_json	longtext	4294967295	Yes	None	none	Field used to store source files json; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
created_by	int	10	Yes	None	none	Field used to store created by; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`
created_at	datetime	N/A	No	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `mebis-consolidator/helpers/history.php`

8.29 mebis_lgu_template_outputs

Purpose / Description: Generated MEBIS LGU template output history.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: mebis-lgu-template/helpers/history.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	bigint unsigned	20	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`
output_token	varchar(32)	32	No	None	Indexed	Field used to store output token; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`
filename	varchar(255)	255	No	None	none	Field used to store filename; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`
municipality_name	varchar(191)	191	No		none	Field used to store municipality name; exact business meaning to be confirmed by project owner where not obvious from code.		Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`
row_count	int unsigned	10	No	0	none	Field used to store row count; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
source_file	varchar(255)	255	No		none	Field used to store source file; exact business meaning to be confirmed by project owner where not obvious from code.		Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`
created_by	int	10	Yes	None	none	Field used to store created by; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`
created_at	datetime	N/A	No	CURRENT_TIMESTAMP	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `mebis-lgu-template/helpers/history.php`

8.30 message_reads

Purpose / Description: Per-user read and trash state for message threads.

Primary Key: id

Foreign Keys: message_id -> contact_messages(id); user_id -> users(id)

Primary Source Basis: inbox/get_thread.php, inbox/mark_read.php, inbox/delete_message.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `inbox/get_thread.php`, `inbox/mark_read.php`, `inbox/delete_message.php`
message_id	int	10	No	None	FK, Indexed	Field used to store message id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `inbox/get_thread.php`, `inbox/mark_read.php`, `inbox/delete_message.php`
user_id	int	10	No	None	FK, Indexed	Field used to store user id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `inbox/get_thread.php`, `inbox/mark_read.php`, `inbox/delete_message.php`
is_read	tinyint(1)	3	Yes	0	none	Field used to store is read; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `inbox/get_thread.php`, `inbox/mark_read.php`, `inbox/delete_message.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
is_trashed	tinyint(1)	3	No	0	none	Field used to store is trashed; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `inbox/get_th read.php`, `inbox/mark_read.php`, `inbox/delete_message.php`
read_at	timestamp	N/A	Yes	None	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `inbox/get_th read.php`, `inbox/mark_read.php`, `inbox/delete_message.php`
trashed_at	datetime	N/A	Yes	None	none	Timestamp field used by the workflow.	2026-04-15 09:30:00	Live schema via information_schema; PHP usage in `inbox/get_th read.php`, `inbox/mark_read.php`, `inbox/delete_message.php`

8.31 municipality

Purpose / Description: Reference list of municipalities.

Primary Key: To be confirmed by project owner

Foreign Keys: None declared in the current schema.

Primary Source Basis: live_refresh.php, payout.php, project_targets_helpers.php, tmp_schema_check.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	varchar(255)	255	No	None	none	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `live_refresh.php`, `payout.php`, `project_targets_helpers.php`
province_id	varchar(255)	255	No	None	none	Field used to store province id; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `live_refresh.php`, `payout.php`, `project_targets_helpers.php`
municipality_name	varchar(255)	255	No	None	none	Field used to store municipality name; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `live_refresh.php`, `payout.php`, `project_targets_helpers.php`

8.32 outgoing

Purpose / Description: Outgoing or forwarded document tracking records.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: pages/track_outgoing.php, pages/update_data_out.php, pages/forward_document.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `pages/track_outgoing.php`, `pages/update_data_out.php`, `pages/forward_document.php`
date_out	date	N/A	No	None	none	Field used to store date out; exact business meaning to be confirmed by project owner where not obvious from code.	2026-04-15	Live schema via information_schema; PHP usage in `pages/track_outgoing.php`, `pages/update_data_out.php`, `pages/forward_document.php`
tracking_number	varchar(250)	250	No	None	none	Field used to store tracking number; exact business meaning to be confirmed by project owner where not obvious from code.	04-15-26-123	Live schema via information_schema; PHP usage in `pages/track_outgoing.php`, `pages/update_data_out.php`, `pages/forward_document.php`

To be confirmed by project owner	Live schema via information_schema; PHP usage in `pages/track_outgoing.php`, `pages/update_data_out.php`, `pages/forward_document.php`

8.33 pdos

Purpose / Description: Reference PDO list used by the application.

Primary Key: id

Foreign Keys: None declared in the current schema.

Primary Source Basis: To be confirmed by project owner

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	int	10	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in project PHP usage files
province_id	varchar(255)	255	No	None	none	Field used to store province id; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in project PHP usage files
pdo	varchar(255)	255	No	None	none	Field used to store pdo; exact business meaning to be confirmed by project owner where not obvious from code.	To be confirmed by project owner	Live schema via information_schema; PHP usage in project PHP usage files

8.34 program_activity_actual_projects

Purpose / Description: Normalized actual project/accomplishment rows linked to implementation activity metadata.

Primary Key: id

Foreign Keys: program_activity_id -> program_activity_metadata(id)

Primary Source Basis: implementation-status/activity_metadata.php, implementation-status/save-imp-status.php, implementation-status/fetch-project-location-records.php

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
id	bigint	19	No	None	PK	Primary identifier for the row.	1	Live schema via information_schema; PHP usage in `implementation-status/activity_metadata.php`, `implementation-status/save-imp-status.php`, `implementation-status/fetch-project-location-records.php`
program_activity_id	int	10	No	None	FK, Indexed	Field used to store program activity id; exact business meaning to be confirmed by project owner where not obvious from code.	1	Live schema via information_schema; PHP usage in `implementation-status/activity_metadata.php`, `implementation-status/save-imp-status.php`, `implementation-status/fetch-project-location-records.php`
actual_project_id	varchar(64)	64	No	None	Indexed	Stable identifier for the saved actual project/accomplishment row.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `implementation-status/activity_metadata.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
								php`, `implementation-status/save-imp-status.php`, `implementation-status/fetch-project-location-records.php`
coverage_entry_id	varchar(64)	64	Yes	None	none	Identifier linking back to the coverage entry from the activity form.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `implementation-status/activity_metadata.php`, `implementation-status/save-imp-status.php`, `implementation-status/fetch-project-location-records.php`
target_project_row_id	varchar(64)	64	Yes	None	none	Identifier linking the actual accomplishment to a target project row when applicable.	To be confirmed by project owner	Live schema via information_schema; PHP usage in `implementation-status/activity_metadata.php`, `implementation-status/save-imp-status.php`, `implementation-status/fetch-project-location-records.php`

Column Name	Data Type	Length / Size	Null Allowed	Default Value	Key Type	Description / Business Meaning	Example Value	Source Basis
sort_order	int	10	No	0	Indexed	Field used to store sort order; exact business meaning to be confirmed by project owner where not obvious from code.	0	Live schema via information_schema; PHP usage in `implementation-status/activity_metadata.php`, `implementation-status/save-imp-status.php`, `implementation-status/fetch-project-location-records.php`

10. Notes on Data Integrity and Validation

- The application performs runtime schema assurance in multiple helpers, so the live schema is the authoritative basis for this document.
- File-upload modules validate file type and size before writing metadata to tracking tables.
- The inbox module supplements thread and reply tables with per-user read and trash-state tracking.
- Fund monitoring uses unique keys and parent-child detail tables to reduce duplicate monthly entries.
- Several logical relationships are enforced at the PHP level without declared foreign-key constraints.

11. Assumptions and Items for Confirmation

- The schema source of truth for this document is the live KODUS database reached through `config.php`; SQL dump files were intentionally excluded per instruction.
- The `aatracker` table retains several legacy field names for historical document-routing data; field labels should be confirmed with the process owner before production publication.
- The active events schema uses `all_day`, but the older `pages/events.php` endpoint still references `allDay`; this appears to be a legacy path and should be confirmed or retired.
- The file `pages/fetch_ph_holidays.php` writes to a `holidays` table, but that table is not present in the current configured database and is therefore excluded from the detailed dictionary.
- Reference tables such as `barangay` and `municipality` do not currently declare full relational constraints even though the application uses them operationally.

12. Conclusion

Based on the current configured KODUS database and the present PHP codebase, the system is operating on a live schema composed of user-management, messaging, document-tracking, beneficiary, calendar, fund-monitoring, crossmatch, deduplication, and implementation-monitoring tables. This document is suitable as a hosting-requirements submission artifact, provided the noted inconsistencies and confirmation items are reviewed before final production sign-off.

Document note: This document was derived from the current KODUS codebase and live configured database and may require final schema validation before production hosting.

Derived from the current KODUS codebase and live configured database; final schema validation is recommended before production hosting.
