II. Rationale

Based on the recent statistical report of the Provincial Statistical Office of Agusan del Sur, the poverty incidence in the province declined to 25.9 percent in 2023 from 39.6 percent in 2021. The data also revealed a notable decrease in the number of families living below the poverty line with approximately 47.81 thousand families in 2023 compared to 70.07 thousand families in 2021. With this demonstrated progress, the continued efforts to support programs and services that aimed to uplift the proportion of communities who are living below the poverty line is of main concern especially the vulnerable communities that are greatly affected by effects of climate change.

In consonance, to support initiatives aimed in reducing poverty incidence exacerbated by climate change and disasters, it is crucial to tackle fundamental issues experienced by these communities as well as determining existing resources that can be utilized or introduction of new projects suitable in their area. In particular, the municipalities of Talacogon, Sibagat, Esperanza, San Luis, and Loreto, is rich in water resources, with the Agusan River serving as a natural catch basin for the region. Unlike other provinces facing extreme water scarcity, Agusan del Sur has access to multiple water sources, making it well-suited for agricultural activities. However, inefficient water management and seasonal flooding still pose challenges to sustainable farming and community livelihoods.

The introduction of Project LAWA at BINHI, a project under the Risk Resiliency Program – Cash-for-Training and Work (RRP-CFTW), a proactive intervention and sustainable solution to combat hunger, alleviate poverty, and decrease the economic vulnerability of the communities by addressing food insecurity and water scarcity exacerbated by climate change and disasters provides timely significance to address issues concerning them.

The Project **LAWA (Local Adaptation to Water Access)** focuses on **diversification of water systems and the establishment of Small Farm Reservoirs (SFRs)** to enhance irrigation efficiency and mitigate the impact of erratic rainfall patterns. By implementing these interventions, communities can better manage water resources for farming while reducing dependency on inconsistent weather conditions. In 2024, the Project LAWA was not implemented in the province because identified projects relative to water management such as construction/rehabilitation of water system is already being implemented and would not complement with the target timeline set for Project LAWA at BINHI. For this year, identified communities as partner beneficiary for the project implementation specifically proposing the activities as mentioned above to effectively complement the Project BINHI through managing water resources and in addition to supplement aquaculture farming.

The Project **BINHI (Breaking Insufficiency Through Nutritious Harvest for the Impoverished)** promotes **banana farming and communal vegetable gardening** as sustainable livelihood strategies. Banana cultivation, being a staple crop in Agusan del Sur, offers economic stability for smallholder farmers, while communal vegetable gardens provide food security and nutritional benefits to local communities. These initiatives align with climate-smart agricultural practices and empower farmers through cash-for-work and cash-for-training programs.

The proposed interventions are based on climate risk assessments and align with national policies on disaster resilience, poverty alleviation, and sustainable agriculture. By

maximizing water resources and promoting diversified farming, these projects aim to enhance agricultural productivity, reduce vulnerability to climate-related disasters, and strengthen community resilience in Agusan del Sur.

III. Legal Bases
